Objective

Aspiring Software Engineer and BSIT graduate with a background in PHP and MySQL, specializing in database management and REST API integration. Gained hands-on experience through a Capstone project involving IoT and web synchronization. Currently expanding technical expertise in Laravel, Next.js, and web security (CSRF/SQLi prevention) to build robust and scalable software solutions.

Technical Skills

- **Languages:** PHP, JavaScript, SQL, C#, Java, Python
 - **Web Development:** HTML5, CSS3, RESTful APIs
 - **Databases:** MySQL, SQLite, Supabase
 - **Tools & Software:** Photoshop, Blender, Vercel, Github, VS Code, Android Studio,
 - **Game Development:** Unity 3D, Unreal Engine
 - **Frameworks:** Laravel, Next.js, Flutter (Dart) - *Familiar with*
 - **Technical Concepts:** RESTful APIs, Database Relationships, CSRF Protection.
-

Professional Experience

Capstone Project (Best Capstone Project Batch 2026) Main Developer

March - November 2025

SheltCare : Pet Adoption and Shelter Monitoring with Temperature Reading and Humidifier Control using ESP32 for Maxx's Furry Friends Animal Shelter

- **Backend & Database Architecture:** Designed and implemented a relational database using MySQL on Hostinger, applying normalization and establishing complex table relationships for data integrity.
- **Full-Stack Development:** Developed the core system using PHP and JavaScript, creating responsive pages and integrating DataTables and SweetAlerts for enhanced user experience and efficient data management.
- **API Integration:** Built and managed REST API endpoints to facilitate seamless real-time communication between the ESP32 IoT hardware and the web platform.
- **System Security:** Implemented robust security measures, including Password Hashing, Session Management, and secure data handling to protect user information.

Intern at GoodYear Container Corp System Developer

March - November 2025

Software Development (Desktop & Web):

- **Downtime Tracking System:** Architect and developed a desktop application using C# and SQL Server Management Studio (SSMS) to monitor and analyze production downtime, improving data accuracy for the production team.
 - **Production Planning System:** Engineered a local web-based application using PHP, MySQL, and REST APIs to streamline order management from planning to production with role-based access control.
 - **Local Network Deployment:** Managed the local deployment of web systems, configuring MySQL permissions and network settings to allow cross-device accessibility within the company Intranet.
-

Education

Bachelor of Science in Information Technology (Cum Laude) Pambayang Dalubhasaan ng Marilao

2022-2026

Certifications and Seminars

- Cyber Security | 2025
- Managing Office Culture as an IT Professional | 2025
- IT Professions and Ethical Issues between IT Workers and Employers | 2025
- Understanding Agile Development: From Sprints and Roles to Code Reviews and CI/CD | 2025
- Intelligent Design: Converging Architecture, Security and AI | 2025
- Beyond Coding: Exploring Business and Product Roles in the Tech Industry | 2025
- IT Project Management | 2024
